Mechanical systems

The following mechanical systems are included in the project:

1st SERVICE

Drainage systems

Drainage systems are installed in accordance with local const ruction requirements by a cert ified professional. 2nd SERVICE

Ventilation

Use ducts to circulate fresh air rather than depending on airflow through small holes or cracks. **3rd SERVICE**

Heating

Underfloor heating is a method of heating a property by embedding strong and flexible tubing on the floor.

Mechanical systems

The following mechanical systems are included in the project:

AC

5th SERVICE

WATER

4000 L water with Wilo pump.

1. DRAINAGE SYSTEM

A drainage system consists of piping that conveys sewage, rainwater, or other liquid waste to the point of disposal in the sewer system or septic tank. Its main objective is to collect and remove wastewater and keep sewer gases out of the building.

2. VENTELATION SYSTEM

Mechanical ventilation improves interior air quality by supplying fresh air and reducing pollutants, as well as regulating moisture, preventing insufficient air move ment and eliminating the need for occupants to open windows.

BATHROOM EXTRACT FANS SILENT-100 DESIGN 3C Series

- A collection of axial hoods with airflow rates of approximately 85 m3/h for attachment to 100 mm-diameter round ducts.
- A flexible silent block system supports the motor, absorbing vibrations and enabling deficient noise levels.
- All fans are made of injection-molded plastic, have an automated shutter, a single-phase, 230V, 50Hz, Class B motor with thermal overload protection, and all these features.
- Each fan has Class II insulation, is IP45 rated, and can withstand air temperatures up to 40°C.

BATHROOM EXTRACT FANS SILENT-200 DESIGN 3C Series

Axial extractors with airflow rates of 175 m3/h for connection to circular ducting with a diameter of 120 mm. All the fans are injection-molded plastic with an automatic shutter and a single-phase 230V -50Hz class B low-consumption motor with therm al overload protection. All the fans have class II insulation, are IP45 rated, and can withstand tempera tures up to 40°C.

3.UNDERFLOOR HEATING

Underfloor heating is a heating system that embeds powerful and flexible tubing in the floor; heat radiated from the floor is transmitted to the walls, creating an ideal comfortable environ ment for that inside. It is both efficient and economical and has several advant ages over radiators.

3.UNDERFLOOR HEATING

We offer a highly efficient underfloor heating system installed to the highest standards by the United Pioneering Business Company. Underfloor heating networks from the Italian emmeti system and emmeti pipes with an aluminum layer were used. Furthermore, emmeti pipes were used for the illuminator a nd the rest of the underfloor heating network 's requirements for central lines. Heating controllers with WIFI thermostat emmeti.

3. UNDERFLOOR HEATING

SINTESI MINI Wi-Fi

Wi-Fi-enabled electronic chronothermostat with weekly programming, installation on a flush-mounted box, and space for just two modules intended for controlling room temperature heating (for the winter). The free app, accessible through Google Play and the AppStore, enables complete control and programming from your smartphone or tablet. You can report any alarm situations by emailing the designated address.
